JOURNAL OF AIRCRAFT
Volume 41, No. 6, November-December 2004

2004 *Journal of Aircraft Journal* Index

How to Use the Index

In the Subject Index, pages 1527–1532, each technical paper is listed under a maximum of three appropriate headings. Note the locating number in boldface type preceding each paper title, and use that number to find the paper in the Chronological Index. The Author Index, pages 1533–1534, lists all authors associated with a given technical paper. The locating numbers are identical to those in the Subject Index. The Chronological Index, pages 1535–1542, also lists all papers by their locating numbers. This listing contains titles, authors and their affiliations, and volume, issue number, and page where the paper appeared. It also gives the AIAA paper number, if any, on which the article was based. Comments, Replies, and Errata are listed directly beneath the paper to which they refer. If the paper to which they refer was published prior to 2004, that paper also will appear in both the Subject and Chronological Indexes. Authors of Comments also are listed in the Author Index.

Subject Index

AIRCRAFT TECHNOLOGY, CONVENTIONAL, STOL/VTOL

Aerodynamics

C04-029 Aerodynamic Shape Design of Rotor Airfoils Undergoing Unsteady Motion
C04-098 Computational-Fluid-Dynamics-Based Enhanced Indicial Aerodynamic Models
C04-087 Nonlinear Model Development from Flight-Test Data for F/A-18E Super Hornet
C04-134 Multi-Element High-Lift Configuration Design Optimization Using Viscous Continuous Adjoint Method
C04-011 Hybrid Turbulence Models for Unsteady Flow Simulation
C04-027 Vortex Flow Visualization of a Yawed Delta Wing with Leading Edge Extension
C04-101 Studies on Vortex Flaps with Rounded Leading Edges for Supersonic Transport Configuration
C04-028 Attachment-Line Approach for Design of a Wing-Body Leading-Edge Fairing
C04-100 Iterative Inverse Design Method Based on Streamline Equations
C04-105 Compressible Dynamic Stall Control Using a Variable Droop Leading Edge Airfoil
C04-099 Drag Reduction From Square Base Afterbodies at High Speeds
C04-013 Lifting-Line Analysis for Twisted Wings and Washout-Optimized Wings
C04-047 Aerodynamic Analysis of Circular and Noncircular Bodies Using Computational and Semi-Empirical Methods
C04-017 Supercritical Airfoil Design for Future High-Altitude Long-Endurance Concepts
C04-102 Hypersonic Power-Law Shaped Waveriders in Off-Design Regimes
C04-049 Effects of Active and Passive Flow Control on Dynamic-Stall Vortex Formation
C04-021 Effects of Reynolds Number on Characteristics of Fixed and Rotary Wings
C04-133 Effects of Surface Finish on Areodynamic Performance of a Sailboat Centerboard
C04-058 Review and Recommended Experimental Procedures For Evaluation of Abrupt Wing Stall Characteristics
C04-060 Usefulness of Transonic Model Static Data in Predicting Flight Abrupt-Wng-Stall
C04-095 Development of the Autogiro: A Technical Perspective
C04-140 Aerodynamic Wing Design of NEXST-2 Using Unstructured-Mesh and Supersonic Inverse Problem
C04-141 Effects of Synthetic Jet Actuation on a Ramping NACA 0015 Airfoil
C04-139 Structure and Induced Drag of a Tip Vortex
C04-168 Understanding Ducted Rotor Antitorque and Directional Control Characteristics Part II: Unsteady Simulations
C04-143 Lifting-Line Analysis of Roll Control and Variable Twist
C04-061 Transonic Free-to-Roll Analysis of Abrupt Wing Stall on Military Aircraft
C04-144 First Look into Effects of Discrete Midspan Vortex Injection on Wing Performance
C04-169 Experimental Study on the Application of Gurney Flap and Apex Flap on Delta Wing
C04-130 Understanding Ducted Rotor Antitorque and Directional Control Characteristics Part I: Steady State Simulation
C04-172 Control of VR-7 Dynamic Stall by Strong Steady Blowing
C04-174 Wind-Tunnel Measurements of Hazard Posed by Lift-Generated Wakes
C04-142 Forced Response of a Vortex Filament Pair Measured in a Water Tunnel
C04-158 An Object-Oriented Unsteady Vortex Lattice Method for Flapping Flight
C04-056 Introduction to the Abrupt Wing Stall Program
C04-118 High-Order Compact Difference Scheme Applied to Double-Delta Wing Vortical Flows
C04-067 Shock Wave/Boundary-Layer Interaction Control Using Streamwise Slots in Transonic Flows
C04-057 Historical Review of Uncommanded Lateral-Directional Motions at Transonic Conditions
C04-153 Visualized Vortices on Unmanned Combat Air Vehicle Planform: Effect of Reynolds Number
C04-015 Swept-Wing Outboard-Horizontal-Stabilizer Aircraft Configuration
C04-033 Analysis and Estimation of the Lift Components of Hovering Insects
C04-034 Wake Displacement Modifications to Reduce Rotorcraft Blade–Vortex Intreaction Noise
C04-059 Development of a Transonic Free-to-Roll Test Capability
C04-068 Navier–Stokes Analysis of Tunnel-Wall Interference Effects on Pitching Delta Wings
C04-031 Rotation and Curvature Correction Assessment for One-and Two-Equation Turbulence Models
C04-115 Viscous Flow Solutions over CN-235 Cargo Aircraft
C04-107 Reynolds-Averaged Navier–Stokes Simulations of Airfoils and Wings with Ice Shapes
C04-138 Edge Vortices of a Double Element Wing in Ground Effect
C04-148 Nonlinear Flutter Aspects of the Flexible High-Speed Civil Transport Semispan Model
C04-135 Application of Vortex Invariants to Roll Up of Vortex Pairs
C04-018 Effect of Intercycle Ice Accretions on Airfoil Performance

C04-175 Analysis of the Flight Attempt by Samuel Langley's "Great Aerodrome"
C04-009 Statistical Analysis of Computational Fluid Dynamics Solutions from the Drag Prediction Workshop
C04-136 Dynamic Stall Control Based on an Optimal Approach
C04-055 Comparisons of a Gurney and Jet-Flap for Hinge-Less Control
C04-122 Thick Wings in Steady and Unsteady Flows
C04-121 Closed-Loop Aeroservoelastic Analysis Validation Method
C04-160 Simulation of Flow About Rotating Forebodies at High Angles of Attack
C04-116 Effects of Flow Separation on Aerodynamic Loads in Linearized Thin Airfoil Theory
C04-053 Aerodynamic Characteristics of Deflected Surfaces in Compressible Flows
C04-187 Effects of Synthetic Jets on Large Amplitude Sinusoidal Pitch Motions
C04-085 Simple Trim Drag Prediction Method Based on the Biplane Theory
C04-185 Effects of Wing and Canard Sweep on Lift-Enhancement of Canard-Configurations
C04-088 Preliminary Model Matching of the EMBRAER 170 Jet
C04-023 Comparison of Predicted and Measured Formation Flight Interference Effects

Aeroelasticity and Aeroservoelasticity

C04-162 Numerical Analysis of Store-Induced Limit-Cycle Oscillation
C04-109 Experiments with Tangential Blowing to Reduce Buffet Response on an F-15 Model
C04-024 Swashplateless Helicopter Rotor with Trailing-Edge Flaps
C04-098 Computational-Fluid-Dynamics-Based Enhanced Indicial Aerodynamic Models
C04-132 Limit Cycle Oscillation of a Typical Airfoil in Transonic Flow
C04-073 Robust Structural Design of an Active Aeroelastic Wing with Maneuver Load Inaccuracies
C04-074 Application of Active-Aeroelastic-Wing Technology to a Joined-Wing Sensorcraft
C04-111 Linear/Nonlinear Supersonic Panel Flutter in a High-Temperature Field
C04-077 Study on the Use of High-Fidelity Methods in Aeroelastic Optimization
C04-110 Improved Understanding of Transonic Flutter: A Three-Parameter Flutter Surface
C04-150 Uncertainty Quantification in Aeroelasticity: Recent Results and Research Challenges
C04-149 The μ-k Method for Robust Flutter Solutions
C04-076 Oscillatory Blowing Control Numerical Simulation of Airfoil Flutter By High Accuracy Method
C04-155 Transpiration Boundary Condition for Computational Fluid Dynamics Solutions in a Noninertial Reference Frames
C04-035 Study of Reduced-Order Models for Gust–Respnse Analysis of Flexible Fixed Wings
C04-078 Identification of Computational-Fluid-Dynamics Based Unsteady Aerodynamic Models for Aeroelastic Analysis
C04-037 Alleviation of Vertical Tail Buffeting of F/A-18 Aircraft
C04-038 Robust Wing Flutter Suppression Considering Aerodynamic Uncertainty
C04-051 Convergence of the Subsonic Doublet Point Method
C04-157 Modeling Viscous Transonic Limit Cycle Oscillation Behavior Using a Harmonic Balance Approach
C04-071 Limit-Cycle Oscillations of Aircraft Caused by Flutter-Induced Drag
C04-036 Models for Aeroservoelastic Analysis wiht Smart Structures
C04-176 A Static/Dynamic Correction Approach for Reduced-Order Modeling of Unsteady Aerodynamics
C04-117 Limit Cycle Oscillations of Swept-Back Trapezoidal Wings at Low Subsonic Flow
C04-039 Mode Acceleration Based Random Gust Stresses in Aeroservoelastic Optimization
C04-148 Nonlinear Flutter Aspects of the Flexible High-Speed Civil Transport Semi-span Model
C04-166 Numerical Analyses of Discrete Gust Response for an Aircraft
C04-108 Flutter Analysis of Aircraft with External Stores Using Modal Coupling
C04-121 Closed-Loop Aeroservoelastic Analysis Validation Method
C04-175 Analysis of the Flight Attempt by Samuel Langley's "Great Aerodrome"
C04-186 Aeroelastic Model Design Using an Integrated Optimization Approach
C04-096 Small Disturbance Euler Simulations for Delta Wing Unsteady Flows due to Harmonic Oscillations
C04-048 Incorrectness of the k-method for Flutter Calculations
C04-119 High-Order vs Low-Order Panel Methods for Unsteady Subsonic Lifting Surfaces

Aerospace Plane

C04-124 High Speed Flight Vehicle Structures: An Overview
C04-123 History of Flight Vehicle Structures 1903–1990

Air Transportation

C04-007 Approach to Characterize Mobility Through Modeling of Solution Spaces for Conceptual Aircraft
C04-006 Impact of Operations Research on the Evolution of the Airline Industry
C04-066 Development and Flight Testing of an Adaptable Vehicle Health-Monitoring Architecture
C04-002 Small Aircraft Transportation System Concept and Technologies
C04-005 From Farther, Faster, Higher To Leaner, Meaner, Greener: Future Directions in Aeronautics
C04-083 Forecasting Intermittent Demand for Aircraft Spare Parts: A Comparative Evaluation of Methods.
C04-003 Next Century Aerospace Traffic Management: The Sky is No Longer the Limit
C04-001 Design of the Blended Wing Body Subsonic Transport
C04-125 Future of Flight Vehicle Structures (2000 to 2023)

Civil Missions and Transportation

C04-003 Next Century Aerospace Traffic Management: The Sky is No Longer the Limit

Communication and Air Traffic Control

C04-003 Next Century Aerospace Traffic Management: The Sky is No Longer the Limit

Configuration Design

C04-156 Mechanization and Control Concepts for Biologically Inspired Micro Air Vehicles
C04-185 Effects of Wing and Canard Sweep on Lift-Enhancement of Canard-Configurations
C04-025 Tilt Duct Vertical Takeoff and Landing Uninhabited Aerial Vehicle Concept Design Study
C04-017 Supercritical Airfoil Design for Future High-Altitude Long-Endurance Concepts
C04-029 Aerodynamic Shape Design of Rotor Airfoils Undergoing Unsteady Motion
C04-134 Multi-Element High-Lift Configuration Design Optimization Using Viscous Continuous Adjoint Method
C04-015 Swept-Wing Outboard-Horizontal-Stabilizer Aircraft Configuration
C04-028 Attachment-Line Approach for Design of a Wing-Body Leading-Edge Fairing
C04-081 Effects of Auxiliary Lift and Propulsion on Helicopter Vibration Reduction and Trim
C04-138 Edge Vortices of a Double Element Wing in Ground Effect
C04-140 Aerodynamic Wing Design of NEXST-2 Using Unstructured-Mesh and Supersonic Inverse Problem
C04-146 Method for Steerable Clustered Round Parachutes
C04-001 Design of the Blended Wing Body Subsonic Transport
C04-005 From Farther, Faster, Higher To Leaner, Meaner, Greener: Future Directions in Aeronautics
C04-007 Approach to Characterize Mobility Through Modeling of Solution Spaces for Conceptual Aircraft

Deceleration Systems

C04-146 Method for Steerable Clustered Round Parachutes
C04-165 Model for Parachute Canopy Deformation and Feedback on Descent Properties

Economics

C04-008 Military Technology Pull and the Structure of the Commercial Aircraft Industry

Flight Control Integration

C04-121 Closed-Loop Aeroservoelastic Analysis Validation Method

Flight Mechanics

C04-054 Estimation of Flight Load History Using a Global Positioning System Data
C04-087 Nonlinear Model Development from Flight-Test Data for F/A-18E Super Hornet
C04-088 Preliminary Model Matching of the EMBRAER 170 Jet
C04-081 Effects of Auxiliary Lift and Propulsion on Helicopter Vibration Reduction and Trim
C04-023 Comparison of Predicted and Measured Formation Flight Interference Effects
C04-086 Aerodynamic Modeling and System Identification from Flight Data–Recent Applications at DLR
C04-114 Approximate Method of Deriving Loiter Time from Range
C04-130 Understanding Ducted Rotor Anti-torque and Directional Control Characteristics Part I: Steady State Simulation
C04-013 Lifting-Line Analysis for Twisted Wings and Washout-Optimized Wings

C04-168 Understanding Ducted Rotor Antitorque and Directional Control Characteristics Part II: Unsteady Simulations
C04-143 Lifting-Line Analysis of Roll Control and Variable Twist
C04-154 Suppression of Wing Rock Using Artificial Neural Networks and Fuzzy Logic Controller
C04-085 Simple Trim Drag Prediction Method Based on the Biplane Theory
C04-120 Flight Path Reconstruction Using Numerical Optimization
C04-155 Transpiration Boundary Condition for Computational Fluid Dynamics Solutions in a Noninertial Reference Frames

Flight Operations

C04-006 Impact of Operations Research on the Evolution of the Airline Industry
C04-131 Continuous Descent Approach: Design and Flight Test for Louisville International Airport
C04-114 Approximate Method of Deriving Loiter Time from Range

General Aviation

C04-015 Swept-Wing Outboard-Horizontal-Stabilizer Aircraft Configuration
C04-007 Approach to Characterize Mobility Through Modeling of Solution Spaces for Conceptual Aircraft
C04-083 Forecasting Intermittent Demand for Aircraft Spare Parts: A Comparative Evaluation of Methods.
C04-145 Transition on a High-Lift Swept Wing in the European Project EUROLIFT
C04-002 Small Aircraft Transportation System Concept and Technologies

Manufacturing

C04-184 HELIPLAT: Design, Aerodynamic, Structural Analysis of Long-Endurance Solar-Powered Stratospheric Platform
C04-044 Study of Multirow Highly Loaded Bolt Joints in Composite Wing Structure
C04-045 Study of Stitched and Unstitched Composite Panels Under Shear Loadings

Noise

C04-167 Level Estimation of Extended Acoustic Sources Using a Parametric Method
C04-034 Wake Displacement Modifications to Reduce Rotorcraft Blade–Vortex Intreaction Noise
C04-131 Continuous Descent Approach: Design and Flight Test for Louisville International Airport

Performance

C04-085 Simple Trim Drag Prediction Method Based on the Biplane Theory
C04-013 Lifting-Line Analysis for Twisted Wings and Washout-Optimized Wings
C04-114 Approximate Method of Deriving Loiter Time from Range
C04-018 Effect of Intercycle Ice Accretions on Airfoil Performance

Powerplant Integration

C04-084 Thermoelectric-Based Power System for Unmanned-Air-Vehicle/Microair-Vehicle Applications

Propeller and Rotor Systems

C04-072 Aeroelastic Analysis of Helicopter Rotor Blades on Deformable Chimera Grids
C04-010 Minimum-Induced Power Loss of a Helicopter Rotor via Circulation Optimization

Rotorcraft

C04-040 Vibration Prediction for Rotor System with Faults Using Coupled Rotor-Fuselage Model
C04-043 Detection and Avoidance of Main Rotor Hub Moment Limits on Rotorcraft
C04-105 Compressible Dynamic Stall Control Using a Variable Droop Leading Edge Airfoil
C04-095 Development of the Autogiro: A Technical Perspective
C04-128 Interdependence of Diffusion and Straining of Helicopter Blade Tip Vortices
C04-063 A Survey of Recent Developments in Rotorcraft Design Optimization
C04-130 Understanding Ducted Rotor Antitorque and Directional Control Characteristics Part I: Steady State Simulation
C04-168 Understanding Ducted Rotor Antitorque and Directional Control Characteristics Part II: Unsteady Simulations
C04-081 Effects of Auxiliary Lift and Propulsion on Helicopter Vibration Reduction and Trim
C04-090 Time-Domain System Identification Methods for Aeromechanical and Aircraft Structural Modeling
C04-034 Wake Displacement Modifications to Reduce Rotorcraft Blade–Vortex Intreaction Noise
C04-129 Transient Helicopter Rotor Wakes in Response to Time-Dependent Blade Pitch Inputs
C04-178 Influence of Nonlinear Elastomer on Isolated Lag Dynamics and Rotor/Fuselage Aeromechanical Stability
C04-010 Minimum-Induced Power Loss of a Helicopter Rotor via Circulation Optimization
C04-172 Control of VR-7 Dynamic Stall by Strong Steady Blowing

Safety

C04-064 NASA Langley Research Center Impact Dynamics Research Facility Research Survey
C04-173 Momentum Vector Control for Spin Recovery
C04-066 Development and Flight Testing of an Adaptable Vehicle Health-Monitoring Architecture

Simulation

C04-093 Application of System Identification Techniques to the F-111C and PC 9/A Aircraft
C04-159 Three-Dimensional Integrated Thermodynamic Simulation for Wing Anti-Icing System
C04-088 Preliminary Model Matching of the EMBRAER 170 Jet
C04-091 Ground-Effect Identification and Autoland System Validation from Flight Data
C04-165 Model for Parachute Canopy Deformation and Feedback on Descent Properties

STOL/VTOL/STOVL

C04-024 Swashplateless Helicopter Rotor with Trailing-Edge Flaps
C04-025 Tilt Duct Vertical Takeoff and Landing Uninhabited Aerial Vehicle Concept Design Study
C04-095 Development of the Autogiro: A Technical Perspective

Structural Design (Including Loads)

C04-044 Study of Multirow Highly Loaded Bolt Joints in Composite Wing Structure
C04-045 Study of Stitched and Unstitched Composite Panels Under Shear Loadings
C04-125 Future of Flight Vehicle Structures (2000 to 2023)
C04-186 Aeroelastic Model Design Using an Integrated Optimization Approach
C04-073 Robust Structural Design of an Active Aeroelastic Wing with Maneuver Load Inaccuracies
C04-112 Analysis, Design, and Optimization of Noncylindrical Fuselage for Blended-Wing-Body Vehicle

Structural Materials

C04-045 Study of Stitched and Unstitched Composite Panels Under Shear Loadings
C04-113 Durability Characterization of Active Fiber Composite Actuators for Helicopter Rotor Blade Applications
C04-125 Future of Flight Vehicle Structures (2000 to 2023)
C04-044 Study of Multirow Highly Loaded Bolt Joints in Composite Wing Structure

Testing, Flight and Ground

C04-090 Time-Domain System Identification Methods for Aeromechanical and Aircraft Structural Modeling
C04-161 Development of Powered Resonance-Tube Actuators for Aircraft Flow Control Applications
C04-066 Development and Flight Testing of an Adaptable Vehicle Health-Monitoring Architecture
C04-060 Usefulness of Transonic Model Static Data in Predicting Flight Abrupt-Wng-Stall
C04-167 Level Estimation of Extended Acoustic Sources Using a Parametric Method
C04-023 Comparison of Predicted and Measured Formation Flight Interference Effects
C04-059 Development of a Transonic Free-to-Roll Test Capability
C04-186 Aeroelastic Model Design Using an Integrated Optimization Approach
C04-058 Review and Recommended Experimental Procedures for Evaluation of Abrupt Wing Stall Characteristics

Vibration

C04-040 Vibration Prediction for Rotor System with Faults Using Coupled Rotor-Fuselage Model
C04-156 Mechanization and Control Concepts for Biologically Inspired Micro Air Vehicles
C04-126 Comparison Between Dedicated Model Updating Methods and Hybrid Method
C04-109 Experiments with Tangential Blowing to Reduce Buffet Response on an F-15 Model
C04-117 Limit Cycle Oscillations of Swept-Back Trapezoidal Wings at Low Subsonic Flow

Weather Hazards

C04-104 Novel Two-Dimensional Modeling Approach for Aircraft Icing
C04-018 Effect of Intercycle Ice Accretions on Airfoil Performance

FLUID DYNAMICS

Aeroacoustics

C04-161 Development of Powered Resonance-Tube Actuators for Aircraft Flow Control Applications

Boundary Layers and Heat Transfer-Turbulent

C04-067 Shock Wave/Boundary-Layer Interaction Control Using Streamwise Slots in Transonic Flows
C04-075 Active Flow Control Using High-Frequency Compliant Structures
C04-012 New Roughness Computation Method and Geometric Accretion Model for Airfoil Icing
C04-032 Correlations to Predict the Streamwise Influence Regions in Supersonic Turbulent Flows

Boundary-Layer Stability and Transition

C04-026 Large-Scale Laminar Flow Tests Evaluated with Linear Stability Theory
C04-170 Transition Prediction on the Slat of a High-Lift System
C04-145 Transition on a High-Lift Swept Wing in the European Project EUROLIFT

Computational Fluid Dynamics

C04-162 Numerical Analysis of Store-Induced Limit-Cycle Oscillation
C04-011 Hybrid Turbulence Models for Unsteady Flow Simulation
C04-170 Transition Prediction on the Slat of a High-Lift System
C04-098 Computational-Fluid-Dynamics-Based Enhanced Indicial Aerodynamic Models
C04-134 Multi-Element High-Lift Configuration Design Optimization Using Viscous Continuous Adjoint Method
C04-158 An Object-Oriented Unsteady Vortex Lattice Method for Flapping Flight
C04-047 Aerodynamic Analysis of Circular and Noncircular Bodies Using Computational and Semi-Empirical Methods
C04-184 HELIPLAT: Design, Aerodynamic, Structural Analysis of Long-Endurance Solar-Powered Stratospheric Platform
C04-065 High-Fidelity Aerostructural Design Optimization of a Supersonic Business Jet
C04-145 Transition on a High-Lift Swept Wing in the European Project EUROLIFT
C04-118 High-Order Compact Difference Scheme Applied to Double-Delta Wing Vortical Flows
C04-031 Rotation and Curvature Correction Assessment for One-and Two-Equation Turbulence Models
C04-032 Correlations to Predict the Streamwise Influence Regions in Supersonic Turbulent Flows
C04-037 Alleviation of Vertical Tail Buffeting of F/A-18 Aircraft
C04-115 Viscous Flow Solutions over CN-235 Cargo Aircraft
C04-069 Numerical Analysis of Aerodynamic Control of Delta Wing by Microflap
C04-072 Aeroelastic Analysis of Helicopter Rotor Blades on Deformable Chimera Grids
C04-136 Dynamic Stall Control Based on an Optimal Approach
C04-106 Simulations of Store Separation from an F/A-18 with a Cartesian Method
C04-107 Reynolds-Averaged Navier–Stokes Simulations of Airfoils and Wings with Ice Shapes
C04-159 Three-Dimensional Integrated Thermodynamic Simulation for Wing Anti-Icing System
C04-009 Statistical Analysis of Computational Fluid Dynamics Solutions from the Drag Prediction Workshop
C04-022 Detached-Eddy Simulation of the F-15E at High Alpha
C04-096 Small Disturbance Euler Simulations for Delta Wing Unsteady Flows due to Harmonic Oscillations
C04-127 Numerical Study of Blowing and Suction Control Mechanism on NACA 0012 Airfoil
C04-147 Numerical and Experimental Study of Flow Structure of Low-Aspect-Ratio Wing

Hydrodynamics

C04-133 Effects of Surface Finish on Areodynamic Performance of a Sailboat Centerboard

Hypersonic Flow

C04-102 Hypersonic Power-Law Shaped Waveriders in Off-Design Regimes

Inlet, Nozzle, Diffuser, and Channel Flows

C04-103 Dynamics and Control of Shock Motion in a Near-Isentropic Inlet

Jets, Wakes, and Viscid-Inviscid Flow Interactions

C04-055 Comparisons of a Gurney and Jet-Flap for Hinge-Less Control
C04-152 Near-Wake Characteristics of an Oscillating NACA 4412 Airfoil
C04-161 Development of Powered Resonance-Tube Actuators for Aircraft Flow Control Applications
C04-127 Numerical Study of Blowing and Suction Control Mechanism on NAC A0012 Airfoil
C04-137 Probabilistic Two-Phase Aircraft Wake Vortex Model: Application and Assessment

Separated Flows

C04-075 Active Flow Control Using High-Frequency Compliant Structures
C04-028 Attachment-Line Approach for Design of a Wing-Body Leading-Edge Fairing
C04-076 Oscillatory Blowing Control Numerical Simulation of Airfoil Flutter By High Accuracy Method
C04-170 Transition Prediction on the Slat of a High-Lift System
C04-171 Particle Image Velocimetry Measurements on a Delta Wing with Periodic Forcing
C04-172 Control of VR-7 Dynamic Stall by Strong Steady Blowing
C04-062 Transonic Unsteady Aerodynamics of the F/A-18E Under Conditions Promoting Abrupt Wing Stall
C04-069 Numerical Analysis of Aerodynamic Control of Delta Wing by Microflap
C04-022 Detached-Eddy Simulation of the F-15E at High Alpha
C04-147 Numerical and Experimental Study of Flow Structure of Low-Aspect-Ratio Wing
C04-116 Effects of Flow Separation on Aerodynamic Loads in Linearized Thin Airfoil Theory
C04-160 Simulation of Flow About Rotating Forebodies at High Angles of Attack

Subsonic Flow

C04-055 Comparisons of a Gurney and Jet-Flap for Hinge-Less Control
C04-100 Iterative Inverse Design Method Based on Streamline Equations
C04-144 First Look into Effects of Discrete Midspan Vortex Injection on Wing Performance
C04-051 Convergence of the Subsonic Doublet Point Method
C04-115 Viscous Flow Solutions over CN-235 Cargo Aircraft

Supersonic Flow

C04-140 Aerodynamic Wing Design of NEXST-2 Using Unstructured-Mesh and Supersonic Inverse Problem
C04-032 Correlations to Predict the Streamwise Influence Regions in Supersonic Turbulent Flows
C04-103 Dynamics and Control of Shock Motion in a Near-Isentropic Inlet
C04-099 Drag Reduction From Square Base Afterbodies at High Speeds
C04-111 Linear/Nonlinear Supersonic Panel Flutter in a High-Temperature Field

Transonic Flow

C04-053 Aerodynamic Characteristics of Deflected Surfaces in Compressible Flows
C04-060 Usefulness of Transonic Model Static Data in Predicting Flight Abrupt-Wng-Stall
C04-062 Transonic Unsteady Aerodynamics of the F/A-18E Under Conditions Promoting Abrupt Wing Stall
C04-067 Shock Wave/Boundary-Layer Interaction Control Using Streamwise Slots in Transonic Flows

Unsteady Flows

C04-011 Hybrid Turbulence Models for Unsteady Flow Simulation
C04-105 Compressible Dynamic Stall Control Using a Variable Droop Leading Edge Airfoil
C04-049 Effects of Active and Passive Flow Control on Dynamic-Stall Vortex Formation
C04-141 Effects of Synthetic Jet Actuation on a Ramping NACA 0015 Airfoil
C04-029 Aerodynamic Shape Design of Rotor Airfoils Undergoing Unsteady Motion
C04-062 Transonic Unsteady Aerodynamics of the F/A-18E Under Conditions Promoting Abrupt Wing Stall
C04-051 Convergence of the Subsonic Doublet Point Method
C04-076 Oscillatory Blowing Control Numerical Simulation of Airfoil Flutter By High Accuracy Method
C04-158 An Object-Oriented Unsteady Vortex Lattice Method for Flapping Flight
C04-157 Modeling Viscous Transonic Limit Cycle Oscillation Behavior Using a Harmonic Balance Approach
C04-171 Particle Image Velocimetry Measurements on a Delta Wing with Periodic Forcing
C04-106 Simulations of Store Separation from an F/A-18 with a Cartesian Method
C04-022 Detached-Eddy Simulation of the F-15E at High Alpha
C04-153 Visualized Vortices on Unmanned Combat Air Vehicle Planform: Effect of Reynolds Number
C04-147 Numerical and Experimental Study of Flow Structure of Low-Aspect-Ratio Wing

C04-152 Near-Wake Characteristics of an Oscillating NACA 4412 Airfoil
C04-176 A Static/Dynamic Correction Approach for Reduced-Order Modeling of Unsteady Aerodynamics
C04-096 Small Disturbance Euler Simulations for Delta Wing Unsteady Flows due to Harmonic Oscillations
C04-136 Dynamic Stall Control Based on an Optimal Approach

Vortices

C04-135 Application of Vortex Invariants to Roll Up of Vortex Pairs
C04-139 Structure and Induced Drag of a Tip Vortex
C04-171 Particle Image Velocimetry Measurements on a Delta Wing with Periodic Forcing
C04-027 Vortex Flow Visualization of a Yawed Delta Wing with Leading Edge Extension
C04-070 Concept of Wake Vortex Behavior Classes
C04-153 Visualized Vortices on Unmanned Combat Air Vehicle Planform: Effect of Reynolds Number
C04-142 Forced Response of a Vortex Filament Pair Measured in a Water Tunnel
C04-144 First Look into Effects of Discrete Midspan Vortex Injection on Wing Performance
C04-138 Edge Vortices of a Double Element Wing in Ground Effect
C04-174 Wind-Tunnel Measurements of Hazard Posed by Lift-Generated Wakes
C04-118 High-Order Compact Difference Scheme Applied to Double-Delta Wing Vortical Flows
C04-137 Probabilistic Two-Phase Aircraft Wake Vortex Model: Application and Assessment
C04-154 Suppression of Wing Rock Using Artificial Neural Networks and Fuzzy Logic Controller
C04-033 Analysis and Estimation of the Lift Components of Hovering Insects

GUIDANCE, CONTROL, AND DYNAMICS TECHNOLOGY

Aircraft Dynamics

C04-059 Development of a Transonic Free-to-Roll Test Capability
C04-054 Estimation of Flight Load History Using a Global Positioning System Data
C04-099 Drag Reduction From Square Base Afterbodies at High Speeds
C04-061 Transonic Free-to-Roll Analysis of Abrupt Wing Stall on Military Aircraft

Aircraft Guidance

C04-091 Ground-Effect Identification and Autoland System Validation from Flight Data
C04-173 Momentum Vector Control for Spin Recovery

Aircraft Stability and Control

C04-086 Aerodynamic Modeling and System Identification from Flight Data–Recent Applications at DLR
C04-058 Review and Recommended Experimental Procedures For Evaluation of Abrupt Wing Stall Characteristics
C04-061 Transonic Free-to-Roll Analysis of Abrupt Wing Stall on Military Aircraft
C04-094 Retrospective and Recent Examples of Aircraft Parameter Identification at NASA Dryden Flight Research Center
C04-160 Simulation of Flow About Rotating Forebodies at High Angles of Attack
C04-093 Application of System Identification Techniques to the F-111C and PC 9/A Aircraft
C04-143 Lifting-Line Analysis of Roll Control and Variable Twist

Avionics Systems

C04-002 Small Aircraft Transportation System Concept and Technologies

Control System Design

C04-103 Dynamics and Control of Shock Motion in a Near-Isentropic Inlet
C04-154 Suppression of Wing Rock Using Artificial Neural Networks and Fuzzy Logic Controller
C04-038 Robust Wing Flutter Suppression Considering Aerodynamic Uncertainty

Flight Mechanics

C04-094 Retrospective and Recent Examples of Aircraft Parameter Identification at NASA Dryden Flight Research Center
C04-089 Flying Qualities Applications of Frequency Responses Identified from Flight Data
C04-014 In-Flight Weight and Balance Identification Using Neural Networks

Handling Qualities

C04-043 Detection and Avoidance of Main Rotor Hub Moment Limits on Rotorcraft
C04-089 Flying Qualities Applications of Frequency Responses Identified from Flight Data

Optimization Techniques

C04-010 Minimum-Induced Power Loss of a Helicopter Rotor via Circulation Optimization

Structural Control

C04-113 Durability Characterization of Active Fiber Composite Actuators for Helicopter Rotor Blade Applications

System Identification

C04-089 Flying Qualities Applications of Frequency Responses Identified from Flight Data
C04-086 Aerodynamic Modeling and System Identification from Flight Data–Recent Applications at DLR
C04-087 Nonlinear Model Development from Flight-Test Data for F/A-18E Super Hornet
C04-091 Ground-Effect Identification and Autoland System Validation from Flight Data
C04-014 In-Flight Weight and Balance Identification Using Neural Networks
C04-094 Retrospective and Recent Examples of Aircraft Parameter Identification at NASA Dryden Flight Research Center
C04-092 Rapid Frequency-Domain Modeling Methods for Unmanned Aerial Vehicle Flight Control Applications
C04-093 Application of System Identification Techniques to the F-111C and PC 9/A Aircraft
C04-090 Time-Domain System Identification Methods for Aeromechanical and Aircraft Structural Modeling

Trajectory Optimization

C04-173 Momentum Vector Control for Spin Recovery

UAVs

C04-156 Mechanization and Control Concepts for Biologically Inspired Micro Air Vehicles
C04-025 Tilt Duct Vertical Takeoff and Landing Uninhabited Aerial Vehicle Concept Design Study
C04-092 Rapid Frequency-Domain Modeling Methods for Unmanned Aerial Vehicle Flight Control Applications

Chronological Index

C04-001 Design of the Blended Wing Body Subsonic Transport. R. H. Liebeck, *The Boeing Company* (**41**, 1, p. 10) Article

C04-002 Small Aircraft Transportation System Concept and Technologies. Bruce J. Holmes and Michael H. Durham, *NASA Langley Research Center*; and Scott E. Tarry, *University Nebraska at Omaha* (**41**, 1, p. 26) Article based on AIAA Paper 2003-2510

C04-003 Next Century Aerospace Traffic Management: The Sky is No Longer the Limit. Jim Cistone, *Lockheed Martin Corporation* (**41**, 1, p. 36) Article based on AIAA Paper 2003-2792

C04-004 Progress in Aeroengine Technology (1939–2003). Dilip R. Ballal, *University of Dayton*; and Joseph Zelina, *U.S. Air Force Research Laboratory* (**41**, 1, p. 43) Article

C04-005 From Farther, Faster, Higher To Leaner, Meaner, Greener: Future Directions in Aeronautics. John H. McMasters, *The Boeing Company*; and Russell M. Cummings, *California Polytechnic State University* (**41**, 1, p. 51) Article based on AIAA Paper 2003-553

C04-006 Impact of Operations Research on the Evolution of the Airline Industry. Michael Clarke and Barry Smith, *Sabre Holdings* (**41**, 1, p. 62) Article

C04-007 Approach to Characterize Mobility Through Modeling of Solution Spaces for Conceptual Aircraft. Daniel A. DeLaurentis, Choongiap Lim, and Taewoo Kang, *Georgia Institute of Technology* (**41**, 1, p. 73) Article

C04-008 Military Technology Pull and the Structure of the Commercial Aircraft Industry. Paul D. Collopy, *DFM Consulting, Inc.* (**41**, 1, p. 85) History of Key Technologies

C04-009 Statistical Analysis of Computational Fluid Dynamics Solutions from the Drag Prediction Workshop. Michael J. Hemsch, *NASA Langley Research Center* (**41**, 1, p. 95) Article based on AIAA Paper 2002-0842

C04-010 Minimum-Induced Power Loss of a Helicopter Rotor via Circulation Optimization. Omri Rand and Vladimir Khromov, *Technion—Israel Institute of Technology, Israel*; and Richard J. Peyran, *U.S. Army Aviation and Missile Command* (**41**, 1, p. 104) Article

C04-011 Hybrid Turbulence Models for Unsteady Flow Simulation. M. Mani, *Boeing* (**41**, 1, p. 110) Article based on AIAA Paper 2002-2959

C04-012 New Roughness Computation Method and Geometric Accretion Model for Airfoil Icing. Guy Fortin, *Universite du Quebec a Chicoutimi, Canada*; Adrian Ilinca, *Universite du Quebec a Rimouski, Canada*; Jean-Louis Laforte, *Universite du Quebec a Chicoutimi, Canada*; and Vincenzo Brandi, *Italian Aerospace Research Center, Italy* (**41**, 1, p. 119) Article based on AIAA Paper 2003-1076

C04-013 Lifting-Line Analysis for Twisted Wings and Washout-Optimized Wings. W. F. Phillips, *Utah State University* (**41**, 1, p. 128) Article based on AIAA Paper 2003-0393

C04-014 In-Flight Weight and Balance Identification Using Neural Networks. Moshe Idan, Gil Iosilevskii, and Sergey Nazarov, *Technion—Israel Institute of Technology, Israel* (**41**, 1, p. 137) Article based on AIAA Paper 2003-5787

C04-015 Swept-Wing Outboard-Horizontal-Stabilizer Aircraft Configuration. J. A. Kentfield and Adam Spragins, *University of Calgary, Canada* (**41**, 1, p. 144) Article based on AIAA Paper 2003-0604

C04-016 Isomer Energy Source in Hybrid Jet Engines for High Altitude Reconnaissance Flight. Christopher E. Hamilton, Paul I. King, and Milton E. Franke, *U.S. Air Force Institute of Technology* (**41**, 1, p. 151) Article based on AIAA Paper 2003-1211

C04-017 Supercritical Airfoil Design for Future High-Altitude Long-Endurance Concepts. Kasim Biber, *Istanbul Technical University, Turkey*; and Carl P. Tilmann, *U.S. Air Force Research Laboratory* (**41**, 1, p. 156) Article based on AIAA Paper 2003-1095

C04-018 Effect of Intercycle Ice Accretions on Airfoil Performance. Andy P. Broeren and Michael B. Bragg, *University of Illinois at Urbana–Champaign*; and Harold E. Addy, *NASA John H. Glenn Research Center at Lewis Field* (**41**, 1, p. 165) Article

C04-019 Aeroelastic Optimization of Adaptive Bumps for Yaw Control. Anand Natarajan, Rakesh K. Kapania and Dan J. Inman, *Virginia Polytechnic Institute and State University* (**41**, 1, p. 175) Article based on AIAA Paper 2002-0707

C04-020 Unsteady Pressures Associated with Vortical Flows and Forced Oscillation. Robert C. Scott, Walter A. Silva, James R. Florance, and Donald F. Keller, *NASA Langley Research Center* (**41**, 1, p. 186) Technical Note

C04-021 Effects of Reynolds Number on Characteristics of Fixed and Rotary Wings. S. Sunada, *Osaka Prefecture University, Japan*; and K. Kawachi, *University of Tokyo, Japan* (**41**, 1, p. 189) Technical Note

C04-022 Detached-Eddy Simulation of the F-15E at High Alpha. James R. Forsythe, *U.S. Air Force Academy*; Kyle D. Squires, *Arizona State University*; Kenneth E. Wurtzler, *Cobalt Solutions, LLC*; and Philippe R. Spalart, *Boeing Commercial Airplanes* (**41**, 2, p. 193) Article based on AIAA Paper 2002-0591

C04-023 Comparison of Predicted and Measured Formation Flight Interference Effects. William Blake, *U.S. Air Force Research Laboratory*; and David R. Gingras, *Bihrle Applied Research* (**41**, 2, p. 201) Article

C04-024 Swashplateless Helicopter Rotor with Trailing-Edge Flaps. Jinwei Shen and Inderjit Chopra, *University of Maryland* (**41**, 2, p. 208) Article

C04-025 Tilt Duct Vertical Takeoff and Landing Uninhabited Aerial Vehicle Concept Design Study. Ozlem Armutcuoglu, Mehmet S. Kavsaoglu, and Ozan Tekinalp, *Middle East Technical University, Turkey* (**41**, 2, p. 215) Design Forum

C04-026 Large-Scale Laminar Flow Tests Evaluated with Linear Stability Theory. Geza Schrauf, *Airbus Deutschland GmbH, Germany* (**41**, 2, p. 224) Article

C04-027 Vortex Flow Visualization of a Yawed Delta Wing with Leading Edge Extension. Myong H. Sohn and Ki Y. Lee, *Korean Air Force Academy, South Korea*; and Jo W. Chang, *Hankuk Aviation University, South Korea* (**41**, 2, p. 231) Article

C04-028 Attachment-Line Approach for Design of a Wing-Body Leading-Edge Fairing. Bas W. van Oudheusden, Casper B. Steenaert, and Loek M. Boermans, *Delft University of Technology, The Netherlands* (**41**, 2, p. 238) Article

C04-029 Aerodynamic Shape Design of Rotor Airfoils Undergoing Unsteady Motion. Yushin Kim and Kwanjung Yee, *Korea Aerospace Research Institute, South Korea*; and Dong-Ho Lee, *Seoul National University, South Korea* (**41**, 2, p. 247) Article

C04-030 High-Order Essentially Nonoscillatory Schemes for Rotary-Wing Wake Computations. Nathan Hariharan, *United Technologies Research Center*; and Lakshmi Sankar, *Georgia Institute of Technology* (**41**, 2, p. 258) Article

C04-031 Rotation and Curvature Correction Assessment for One-and Two-Equation Turbulence Models. M. Mani, J. A. Ladd, and W. W. Bower, *The Boeing Company* (**41**, 2, p. 268) Article

C04-032 Correlations to Predict the Streamwise Influence Regions in Supersonic Turbulent Flows. Manohari D. Ramesh and John C. Tannehill, *Iowa State University* (**41**, 2, p. 274) Article

C04-033 Analysis and Estimation of the Lift Components of Hovering Insects. Lance W. Traub, *Texas A&M University* (**41**, 2, p. 284) Article

C04-034 Wake Displacement Modifications to Reduce Rotorcraft Blade–Vortex Intreaction Noise. Juan C. Abello and Albert R. George, *Cornell University* (**41**, 2, p. 290) Article

C04-035 Study of Reduced-Order Models for Gust–Respnse Analysis of Flexible Fixed Wings. M. Gennaretti and F. Mastroddi, *Universita degli Studi Roma Tre, Italy* (**41**, 2, p. 304) Article

C04-036 Models for Aeroservoelastic Analysis with Smart Structures. Moti Karpel and Boris Moulin, *Technion–Israel Institute of Technology, Israel* (**41**, 2, p. 314) Article

C04-037 Alleviation of Vertical Tail Buffeting of F/A-18 Aircraft. Essam F. Sheta, *CFD Research Corporation* (**41**, 2, p. 322) Article

C04-038 Robust Wing Flutter Suppression Considering Aerodynamic Uncertainty. Dan Borglund and Ulrik Nilsson, *Royal Institute of Technology, Sweden* (**41**, 2, p. 331) Article

C04-039 Mode Acceleration Based Random Gust Stresses in Aeroservoelastic Optimization. Frode Engelsen, *The Boeing Company*; and Eli Livne, *University of Washington* (**41**, 2, p. 335) Article

C04-040 Vibration Prediction for Rotor System with Faults Using Coupled Rotor-Fuselage Model. Mao Yang and Inderjit Chopra, *University of Maryland*; and David J. Haas, *Naval Surface Warfare Center* (**41**, 2, p. 348) Article

C04-041 Linkup Strength of 2024-T3 Bolted Lap Joint Panels with Multiple Site Damage. Ala L. Hijazi, Bert L. Smith, and Thomas E. Lacy, *Wichita State University* (**41**, 2, p. 359) Article

C04-042 Elastic Analysis of A Pin Loaded Lug. A. Aslam, *Mepco Schlenk Engineering College, India*; G. S. Sekhon and R. Kumar, *Indian Institute of Technology Delhi, India* (**41**, 2, p. 365) Article based on AIAA Paper 2002-1325

C04-043 Detection and Avoidance of Main Rotor Hub Moment Limits on Rotorcraft. Joseph F. Horn and Nilesh Sahani, *Pennsylvania State University* (**41**, 2, p. 372) Article based on AIAA Paper 2001-4138

C04-044 Study of Multirow Highly Loaded Bolt Joints in Composite Wing Structure. Hsien-Yang Yeh, Johnathan J. Lee, and Daniel Y. Yang, *California State University, Long Beach*; and Hsien-Liang Yeh, *I-Shou University, China (PRC)* (**41**, 2, p. 380) Article

C04-045 Study of Stitched and Unstitched Composite Panels Under Shear Loadings. Hsien-Yang Yeh, Johnathan J. Lee, and Daniel Y. Yang, *California State University*; and Hsien-Liang Yeh, *I-Shou University, China (PRC)* (**41**, 2, p. 386) Article

C04-046 Corrosion Fatigue in 7075-T6 Aluminum: Life Prediction Issues for Carrier Based Operations. Basir Shafiq, *University of Puerto Rico*; and Vinod S. Agarwala, *U.S. Naval Air Warfare Center* (**41**, 2, p. 393) Article

C04-047 Aerodynamic Analysis of Circular and Noncircular Bodies Using Computational and Semi-Empirical Methods. Shadi Mahjoob, *Aerospace Research Institute, Iran*; Mahmoud Mani, *Amir-Kabir University of Technology, Iran*; and Mohammad Taeibi-Rahni, *Sharif University of Technology, Iran* (**41**, 2, p. 399) Technical Note based on AIAA Paper 2002-2941

C04-048 Incorrectness of the *k* Method for Flutter Calculations. Mayuresh J. Patil, *Virginia Polytechnic Institute and State University*; Rudolph N. Yurkovich, *The Boeing Company*; and Dewey H. Hodges, *Georgia Institute of Technology* (**41**, 2, p. 402) Technical Note

C04-049 Effects of Active and Passive Flow Control on Dynamic-Stall Vortex Formation. Lance W. Traub, Adam Miller, and Othon Rediniotis, *Texas A&M University* (**41**, 2, p. 405) Technical Note

C04-050 Application of Fiber Optic Sensor and Piezoelectric Actuator to Flutter Suppression. Do-Hyung Kim, Jae-Hung Han, and In Lee, *Korea Advanced Institute of Science and Technology, South Korea* (**41**, 2, p. 409) Technical Note

C04-051 Convergence of the Subsonic Doublet Point Method. L. H. van Zyl, *Defencetek, CSIR, South Africa*; and T. Ueda, *Japan Aerospace Exploration Agency, Japan* (**41**, 2, p. 411) Technical Note

C04-052 Rapid Technique for Wind-Tunnel Model Manufacture. Andrew L. Heyes and David A. Smith, *Imperial College London, Great Britain* (**41**, 2, p. 413) Technical Note

C04-053 Aerodynamic Characteristics of Deflected Surfaces in Compressible Flows. Kung-Ming Chung, *National Cheng Kung University, Taiwan (ROC)* (**41**, 2, p. 415) Technical Note

C04-054 Estimation of Flight Load History Using a Global Positioning System Data. Fredrik de Try, *Royal Institute of Technology, Sweden* (**41**, 2, p. 418) Technical Note

C04-055 Comparisons of a Gurney and Jet-Flap for Hinge-Less Control. Lance W. Traub, Adam C. Miller, and Othon Rediniotis, *Texas A&M University* (**41**, 2, p. 420) Technical Note

C04-056 Introduction to the Abrupt Wing Stall Program. Robert M. Hall, *NASA Langley Research Center*; and Shawn H. Woodson, *Naval Air System Command* (**41**, 3, p. 425) Article based on AIAA Paper 2003-0589

C04-057 Historical Review of Uncommanded Lateral-Directional Motions at Transonic Conditions. Joseph R. Chambers, *Ball Aerospace Systems Division*; and Robert M. Hall, *NASA Langley Research Center* (**41**, 3, p. 436) Article based on AIAA Paper 2003-0590

C04-058 Review and Recommended Experimental Procedures for Evaluation of Abrupt Wing Stall Characteristics. Francis J. Capone, Robert M. Hall, D. Bruce Owens, John E. Lamar, and S. Naomi McMillin, *NASA Langley Research Center* (**41**, 3, p. 448) Article based on AIAA Paper 2003-0922

C04-059 Development of a Transonic Free-To-Roll Test Capability. Francis J. Capone, D. Bruce Owens, and Robert M. Hall, *NASA Langley Research Center* (**41**, 3, p. 456) Article based on AIAA Paper 2003-0749

C04-060 Usefulness of Transonic Model Static Data in Predicting Flight Abrupt-Wng-Stall. John E. Lamar, Robert M. Hall, Francis J. Capone, and Naomi McMillin, *NASA Langley Research Center* (**41**, 3, p. 464) Article based on AIAA Paper 2003-0745

C04-061 Transonic Free-to-Roll Analysis of Abrupt Wing Stall on Military Aircraft. D. B. Owens, Francis J. Capone, Robert M. Hall, and Jay M. Brandon, *NASA Langley Research Center*; and Joseph R. Chambers, *Ball Aerospace Systems Division* (**41**, 3, p. 474) Article based on AIAA Paper 2003-0750

C04-062 Transonic Unsteady Aerodynamics of the F/A-18E Under Conditions Promoting Abrupt Wing Stall. David M. Schuster, *NASA Langley Research Center*; and James E. Byrd, *Lockheed Martin Engineering and Sciences* (**41**, 3, p. 485) Article based on AIAA Paper 2003-0593

C04-063 A Survey of Recent Developments in Rotorcraft Design Optimization. Ranjan Ganguli, *Indian Institute of Science, India* (**41**, 3, p. 493) Survey Paper

C04-064 NASA Langley Research Center Impact Dynamics Research Facility Research Survey. Karen E. Jackson and Edwin L. Fasanella, *NASA Langley Research Center* (**41**, 3, p. 511) History of Key Technologies based on AIAA Paper 2003-1896

C04-065 High-Fidelity Aerostructural Design Optimization of a Supersonic Business Jet. Joaquin R. Martins, *University of Toronto Institute for Aerospace Studies, Canada*; Juan J. Alonso, *Stanford University*; and James J. Reuther, *NASA Ames Research Center* (**41**, 3, p. 523) Article

C04-066 Development and Flight Testing of an Adaptable Vehicle Health-Monitoring Architecture. Stanley E. Woodard, Neil C. Coffey, and Guillermo A. Gonzalez, *NASA Langley Research Center*; B. D. Taylor, *Swales Corporation*; Rube R. Brett, *Zin Corporation*; Keith L. Woodman, Brenton W. Weathered, and Courtney H. Rollins, *NASA Langley Research Center* (**41**, 3, p. 531) Article based on AIAA Paper 2002-5802

C04-067 Shock Wave/Boundary-Layer Interaction Control Using Streamwise Slots in Transonic Flows. A. Smith and H. Babinsky, *University of Cambridge, Great Britain*; J. L. Fulker, *QinetiQ, Great Britain*; and P. R. Ashill, *Cranfield College of Aeronautics, Great Britain* (**41**, 3, p. 540) Article

C04-068 Navier–Stokes Analysis of Tunnel-Wall Interference Effects on Pitching Delta Wings. Yung-Gyo Lee, *University of Kansas, South Korea*; and C. E. Lan, *University of Kansas* (**41**, 3, p. 547) Article

C04-069 Numerical Analysis of Aerodynamic Control of Delta Wing by Microflap. Takeshi Kaiden and Yoshiaki Nakamura, *Nagoya University, Japan* (**41**, 3, p. 555) Article

C04-070 Concept of Wake Vortex Behavior Classes. Michael Frech and Tobias Zinner, *Institute of Atmosphere Physics, DLR, German Aerospace Center, Germany* (**41**, 3, p. 564) Article

C04-071 Limit-Cycle Oscillations of Aircraft Caused by Flutter-Induced Drag. Mayuresh Patil, *Virginia Polytechnic Institute and State University* (**41**, 3, p. 571) Article

C04-072 Aeroelastic Analysis of Helicopter Rotor Blades on Deformable Chimera Grids. Hubert Pomin and Siegfried Wagner, *University of Stuttgart, Germany* (**41**, 3, p. 577) Article

C04-073 Robust Structural Design of an Active Aeroelastic Wing with Maneuver Load Inaccuracies. P. S. Zink, Daniella E. Raveh, and Dimitri N. Mavris, *Georgia Institute of Technology* (**41**, 3, p. 585) Article based on AIAA Paper 2002-5603

C04-074 Application of Active-Aeroelastic-Wing Technology to a Joined-Wing Sensorcraft. Gregory W. Reich, *U.S. Air Force Research Laboratory*; Daniella Raveh and Scott Zink, *Georgia Institute of Technology* (**41**, 3, p. 594) Article based on AIAA Paper 2002-1633

C04-075 Active Flow Control Using High-Frequency Compliant Structures. Russell F. Osborn, Sridhar Kota, and Joel A. Hetrick, *FlexSys, Inc.*; Donald E. Geister, *University of Michigan*; Carl P. Tilmann and Jinyong Joo, *U.S. Air Force Research Laboratory* (**41**, 3, p. 603) Article based on AIAA Paper 2001-4144

C04-076 Oscillatory Blowing Control Numerical Simulation of Airfoil Flutter By High Accuracy Method. Jin Yan and Yuan Xin, *Tsinghua University, China (PRC)* (**41**, 3, p. 610) Article

C04-077 Study on the Use of High-Fidelity Methods in Aeroelastic Optimization. Guru P. Guruswamy, *NASA Ames Reseach Center*; and Shigeru Obayashi, *Tohoku University, Japan* (**41**, 3, p. 616) Article based on AIAA Paper 2002-5638

C04-078 Identification of Computational-Fluid-Dynamics Based Unsteady Aerodynamic Models for Aeroelastic Analysis. Daniella E. Raveh, *TechnionÓIsrael Institute of Technology, Israel* (**41**, 3, p. 620) Article based on AIAA Paper 2003-1407

C04-079 Development of a Fuzzy Probabilistic Methodology for Multiple-Site Fatigue Damage. U. O. Akpan, P. A. Rushton, and T. S. Koko, *Martec, Ltd., Canada* (**41**, 3, p. 628) Article

C04-080 Strength Analysis of Ceramics Under Different Constraints by Movable Cellular Automata Method. Ke Chen, *Nanjing University of Science and Technology, China (PRC)*; Dewu Huang, *Shenyang Institute of Technology, China (PRC)*; E. V. Shilko and S. G. Psakhie, *Russian Academy of Sciences, Russia* (**41**, 3, p. 641) Article

C04-081 Effects of Auxiliary Lift and Propulsion on Helicopter Vibration Reduction and Trim. Martin K. Sekula, *NASA Langley Research Center*; and Farhan Gandhi, *The Pennsylvania State University* (**41**, 3, p. 645) Article

C04-082 Comparison of Residual Strength Estimates for Bolted Lap-Joint Panels. Ala L. Hijazi, Thomas E. Lacy, and Bert L. Smith, *Wichita State University* (**41**, 3, p. 657) Article

C04-083 Forecasting Intermittent Demand for Aircraft Spare Parts: A Comparative Evaluation of Methods. A. A. Ghobbar, *City University London, Great Britain* (**41**, 3, p. 665) Article

C04-084 Thermoelectric-Based Power System for Unmanned-Air-Vehicle/Microair-Vehicle Applications. Jonathan Fleming and Wing Ng, *Techsburg, Inc.*; and Saeid Ghamaty, *Hi-Z Technology* (**41**, 3, p. 674) Technical Note

C04-085 Simple Trim Drag Prediction Method Based on the Biplane Theory. Kazuhiro Kusunose, *The Boeing Company* (**41**, 3, p. 676) Technical Note based on AIAA Paper 2004-901

C04-086 Aerodynamic Modeling and System Identification from Flight Data–Recent Applications at DLR. Ravindra V. Jategaonkar, Dietrich Fischenberg, and Wolfgang Gruenhagen, *DLR, German Aerospace Center, Germany* (**41**, 4, p. 681) Article

C04-087 Nonlinear Model Development from Flight-Test Data for F/A-18E Super Hornet. Alfonso C. Paris, *Science Applications International Corporation*; and Michael Bonner, *Naval Air Systems Command* (**41**, 4, p. 692) Article based on AIAA Paper 2003-5535

C04-088 Preliminary Model Matching of the EMBRAER 170 Jet. Sergio Cavalcanti, *Empresa Brasileira de Aeronautica, Brazil*; and Marco Papini, *Opal-RT Technologies, Canada* (**41**, 4, p. 703) Article based on AIAA Paper 2003-5534

C04-089 Flying Qualities Applications of Frequency Responses Identified from Flight Data. Edmund J. Field and Kenneth F. Rossitto, *The Boeing Company*; and John Hodgkinson, *AeroArts LLC* (**41**, 4, p. 711) Article based on AIAA Paper 2003-5537

C04-090 Time-Domain System Identification Methods for Aeromechanical and Aircraft Structural Modeling. Raman K. Mehra and Ravi K. Prasanth, *Scientific Systems Company, Inc.* (**41**, 4, p. 721) Article

C04-091 Ground-Effect Identification and Autoland System Validation from Flight Data. Bernard Devesa, Christophe Jourdan, and Christian Marc, *Airbus, France* (**41**, 4, p. 730) Article

C04-092 Rapid Frequency-Domain Modeling Methods for Unmanned Aerial Vehicle Flight Control Applications. Colin R. Theodore, Mark B. Tischler, and Jason D. Colbourne, *Ames Research Center* (**41**, 4, p. 735) Article based on AIAA Paper 2003-5538

C04-093 Application of System Identification Techniques to the F-111C and PC 9/A Aircraft. Jan S. Drobik and Geoff J. Brian, *Defence Science and Technology Organisation, Australia* (**41**, 4, p. 744) Article

C04-094 Retrospective and Recent Examples of Aircraft Parameter Identification at NASA Dryden Flight Research Center. K. C. Wang, *The Aerospace Corporation*; and Kenneth W. Iliff, (**41**, 4, p. 752) Article

C04-095 Development of the Autogiro: A Technical Perspective. J. Gordon Leishman, *University of Maryland* (**41**, 4, p. 765) Survey Paper

C04-096 Small Disturbance Euler Simulations for Delta Wing Unsteady Flows due to Harmonic Oscillations. Caroline Weishaupl and Boris Laschka, *Technische Universitat Munchen* (**41**, 4, p. 782) Article

C04-097 Aircraft Optimization for Minimal Environmental Impact. Nicolas E. Antoine and Ilan M. Kroo, *Stanford University* (**41**, 4, p. 790) Article based on AIAA Paper 2002-5868

C04-098 Computational-Fluid-Dynamics-Based Enhanced Indicial Aerodynamic Models. Jayanarayanan Sitaraman and James D. Baeder, *University of Maryland* (**41**, 4, p. 798) Article

C04-099 Drag Reduction From Square Base Afterbodies at High Speeds. N. B. Mathur and P. R. Viswanath, *National Aerospace Laboratories, India* (**41**, 4, p. 811) Article

C04-100 Iterative Inverse Design Method Based on Streamline Equations. Jianzhong Yu and Ion Paraschivoiu, *Ecole Polytechnique de Montréal, Canada*; and Farooq Saeed, *King Fahd University of Petroleum and Minerals, Saudi Arabia* (**41**, 4, p. 821) Article

C04-101 Studies on Vortex Flaps with Rounded Leading Edges for Supersonic Transport Configuration. Kenichi Rinoie and Katsuhiro Miyata, *University of Tokyo, Japan*; Dong Youn Kwak and Masayoshi Noguchi, *National Aerospace Laboratory, Japan* (**41**, 4, p. 829) Article

C04-102 Hypersonic Power-Law Shaped Waveriders in Off-Design Regimes. I. I. Mazhul and R. D. Rakhimov, *Russian Academy of Science, Russia* (**41**, 4, p. 839) Article

C04-103 Dynamics and Control of Shock Motion in a Near-Isentropic Inlet. Douglas G. MacMartin, *California Institute of Technology* (**41**, 4, p. 846) Article

C04-104 Novel Two-Dimensional Modeling Approach for Aircraft Icing. Krzysztof Szilder, *National Research Council, Canada*; and Edward P. Lozowski, *University of Alberta, Canada* (**41**, 4, p. 854) Article based on AIAA Paper 2003-1075

C04-105 Compressible Dynamic Stall Control Using a Variable Droop Leading Edge Airfoil. M. S. Chandrasekhara, P. B. Martin, and C. Tung, *NASA Ames Research Center* (**41**, 4, p. 862) Article based on AIAA Paper 2003-0048

C04-106 Simulations of Store Separation from an F/A-18 with a Cartesian Method. Scott M. Murman, *ELORET*; Michael J. Aftosmis, *NASA Ames Research Center*; and Marsha J. Berger, *Courant Institute New York* (**41**, 4, p. 870) Article based on AIAA Paper 2003-1246

C04-107 Reynolds-Averaged Navier–Stokes Simulations of Airfoils and Wings with Ice Shapes. Jianping Pan and Eric Loth, *University of Illinois at Urbana–Champaign* (**41**, 4, p. 879) Article based on AIAA Paper 2003-0729

C04-108 Flutter Analysis of Aircraft with External Stores Using Modal Coupling. M. Karpel and B. Moulin, *Technion–Israel Institute of Technology, Israel*; L. Anguita, C. Maderuelo, and H. Climent, *EADS–CASA, Spain* (**41**, 4, p. 892) Article

C04-109 Experiments with Tangential Blowing to Reduce Buffet Response on an F-15 Model. M. A. Ferman, *Parks College, St. Louis University*; L. J. Huttsell and E. W. Turner, *U.S. Air Force Research Laboratory* (**41**, 4, p. 903) Article

C04-110 Improved Understanding of Transonic Flutter: A Three-Parameter Flutter Surface. Denis B. Kholodar, Earl H. Dowell, Jeffrey P. Thomas, and Kenneth C. Hall, *Duke University* (**41**, 4, p. 911) Article

C04-111 Linear/Nonlinear Supersonic Panel Flutter in a High-Temperature Field. Liviu Librescu, *Virginia Polytechnic Institute and State University*; Piergiovanni Marzocca, *Clarkson University*; and Walter A. Silva, *NASA Langley Research Center* (**41**, 4, p. 918) Article

C04-112 Analysis, Design, and Optimization of Noncylindrical Fuselage for Blended-Wing-Body Vehicle. V. Mukhopadhyay and J. Sobieszczanski-Sobieski, *NASA Langley Research Center*; I. Kosaka, G. Quinn, and G. N. Vanderpaats, *Vanderplaats R&D Inc.* (**41**, 4, p. 925) Article based on AIAA Paper 2002-5664

C04-113 Durability Characterization of Active Fiber Composite Actuators for Helicopter Rotor Blade Applications. Viresh K. Wickramasinghe, *Institute for Aerospace Research, National Research Council Canada, Canada*; and Nesbitt W. Hagood, *Continuum Photonics, Inc.* (**41**, 4, p. 931) Article based on AIAA Paper 2003-1511

C04-114 Approximate Method of Deriving Loiter Time from Range. Daniel P. Raymer, *Conceptual Research Corporation* (**41**, 4, p. 938) Technical Note

C04-115 Viscous Flow Solutions over CN-235 Cargo Aircraft. Murat Uygun, *Turkish Air Force Academy, Turkey*; and Ismail H. Tuncer, *Middle East Technical University, Turkey* (**41**, 4, p. 940) Technical Note based on AIAA Paper 2003-3661

C04-116 Effects of Flow Separation on Aerodynamic Loads in Linearized Thin Airfoil Theory. Alexander Khrabrov, *TsAGI, Russia*; and Michael V. OL, *U.S. Air Force Research Laboratory* (**41**, 4, p. 944) Technical Note

C04-117 Limit Cycle Oscillations of Swept-Back Trapezoidal Wings at Low Subsonic Flow. Saeed Shokrollahi, *Amirkabir University of Technolgy, Iran*; and Firooz Bakhtiari-Nejad, *Amirkabir University of Technology, Iran* (**41**, 4, p. 948) Technical Note

C04-118 High-Order Compact Difference Scheme Applied to Double-Delta Wing Vortical Flows. Tomoyuki Arasawa, *Yokohama National University, Japan*; Kozo Fujii, *Japan Aerospace Exploration Society, Japan*; and Koji Miyaji, *Yokohama National University, Japan* (**41**, 4, p. 953) Technical Note based on AIAA Paper 2003-3537

C04-119 High-Order vs Low-Order Panel Methods for Unsteady Subsonic Lifting Surfaces. Ping Chih Chen, Danny D. Liu, and Darius Sarhaddi, *ZONA Technology, Inc.* (**41**, 4, p. 957) Technical Note

C04-120 Flight Path Reconstruction Using Numerical Optimization. Fredrik de Try, *Royal Institute of Technology, Sweden* (**41**, 4, p. 959) Technical Note

C04-121 Closed-Loop Aeroservoelastic Analysis Validation Method. Ruxandra M. Botez, Djallel E. Biskri, Alexandre Doin, Iulian Cotoi, and Petrisor Parvu, *Ecole de Technologie Superieure, Canada* (**41**, 4, p. 962) Technical Note

C04-122 Thick Wings in Steady and Unsteady Flows. Reza Karkehabadi, *Lockheed Martin/NASA Langley Research Center* (**41**, 4, p. 964) Technical Note

C04-123 History of Flight Vehicle Structures 1903-1990. D. Paul and D. Pratt, *U.S. Air Force Research Laboratory* (**41**, 5, p. 969) History of Key Technologies

C04-124 High Speed Flight Vehicle Structures: An Overview. Christopher L. Clay, *U.S. Air Force Research Laboratory* (**41**, 5, p. 978) Article

C04-125 Future of Flight Vehicle Structures (2000 to 2023). William J. Renton, *The Boeing Company*; Dennis Olcott, *Dennis Olcott Adams Aircraft*; William Roeseler, *The Boeing Company*; Randy Batzer, *Lockheed Martin*; William Baron, *Wright–Patterson Air Force Base*; and Alexander Velicki, *The Boeing Company* (**41**, 5, p. 986) Article

C04-126 Comparison Between Dedicated Model Updating Methods and Hybrid Method. Ali S. Nobari and Mohammad A. Farjoo, *Amirkabir University of Technology, Iran* (**41**, 5, p. 999) Article

C04-127 Numerical Study of Blowing and Suction Control Mechanism on NACA0012 Airfoil. L. Huang, P. G. Huang, and R. P. LeBeau, *University of Kentucky*; and T. Hauser, *Utah State University* (**41**, 5, p. 1005) Article

C04-128 Interdependence of Diffusion and Straining of Helicopter Blade Tip Vortices. Manikandan Ramasamy and J. G. Leishman, *University of Maryland* (**41**, 5, p. 1014) Article

C04-129 Transient Helicopter Rotor Wakes in Response to Time-Dependent Blade Pitch Inputs. Shreyas Ananthan and J. Gordon Leishman, *University of Maryland* (**41**, 5, p. 1025) Article

C04-130 Understanding Ducted Rotor Antitorque and Directional Control Characteristics Part I: Steady State Simulation. Emre Alpman and Lyle N. Long, *The Pennsylvania State University*; and Bruce D. Kothmann, *Boeing Defense and Space Group* (**41**, 5, p. 1042) Article

C04-131 Continuous Descent Approach: Design and Flight Test for Louisville International Airport. John-Paul B. Clarke, Nhut T. Ho, and Liling Ren, *Massachusetts Institute of Technology*; John A. Brown, Kevin R. Elmer, Kwok-On Tong, and Joseph K. Wat, *The Boeing Company* (**41**, 5, p. 1054) Article

C04-132 Limit Cycle Oscillation of a Typical Airfoil in Transonic Flow. Denis B. Kholodar, *U. S. Air Force Academy*; Earl H. Dowell, Jeffrey P. Thomas, and Kenneth C. Hall, *Duke University* (**41**, 5, p. 1067) Article

C04-133 Effects of Surface Finish on Areodynamic Performance of a Sailboat Centerboard. David S. Miklosovic, Michael P. Schultz, and Christian Esquivel, *United States Naval Academy* (**41**, 5, p. 1073) Article

C04-134 Multi-Element High-Lift Configuration Design Optimization Using Viscous Continuous Adjoint Method. Sangho Kim, Juan J. Alonso, and Antony Jameson, *Stanford University* (**41**, 5, p. 1082) Article based on AIAA Paper 2002-0844

C04-135 Application of Vortex Invariants to Roll Up of Vortex Pairs. Vernon J. Rossow, *NASA Ames Research Center* (**41**, 5, p. 1098) Article

C04-136 Dynamic Stall Control Based on an Optimal Approach. Taisul Ahn, Chongam Kim, and Oh-Hyun Rho, *Seoul National University, South Korea* (**41**, 5, p. 1106) Article based on AIAA Paper 2001-0255

C04-137 Probabilistic Two-Phase Aircraft Wake Vortex Model: Application and Assessment. Frank Holzäpfel, *DLR, German Aerospace Center, Germany*; and Robert E. Robins, *NorthWest Research Associates, Inc.* (**41**, 5, p. 1117) Article based on AIAA Paper 2003-3809

C04-138 Edge Vortices of a Double Element Wing in Ground Effect. Xin Zhang and Jonathan Zerihan, *University of Southampton, Great Britain* (**41**, 5, p. 1127) Article

C04-139 Structure and Induced Drag of a Tip Vortex. D. Birch and T. Lee, *McGill University, Canada*; F. Mokhtarian and F. Kafyeke, *Bombardier Aerospace* (**41**, 5, p. 1138) Article

C04-140 Aerodynamic Wing Design of NEXST-2 Using Unstructured-Mesh and Supersonic Inverse Problem. Takeshi Fujita, Kisa Matsushima, and Kazuhiro Nakahashi, *Tohoku University, Japan* (**41**, 5, p. 1146) Article

C04-141 Effects of Synthetic Jet Actuation on a Ramping NACA 0015 Airfoil. Lance W. Traub, Adam Miller, and Othon Rediniotis, *Texas A&M University* (**41**, 5, p. 1153) Article

C04-142 Forced Response of a Vortex Filament Pair Measured in a Water Tunnel. Renaud Rebours, *The Boeing Company*; Linda K. Klilment and Kamran Rokhsaz, *Wichita State University* (**41**, 5, p. 1163) Article based on AIAA Paper 2001-2448

C04-143 Lifting-Line Analysis of Roll Control and Variable Twist. W. F. Phillips, N. R. Alley, and W. D. Goodrich, *Utah State University* (**41**, 5, p. 1169) Article based on AIAA Paper 2003-4061

C04-144 First Look into Effects of Discrete Midspan Vortex Injection on Wing Performance. Vojin R. Nikolic, *Minnesota State University*; and Eric J. Jumper, *University of Notre Dame* (**41**, 5, p. 1177) Article

C04-145 Transition on a High-Lift Swept Wing in the European Project EUROLIFT. Jean Perraud, Alain Séraudie, and Frédéric Moens, *Office National d'Etudes et de Recherches Aerospatiales (ONERA), France* (**41**, 5, p. 1183) Article based on AIAA Paper 2003-3796

C04-146 Method for Steerable Clustered Round Parachutes. Calvin K. Lee and John E. Buckley, *U.S. Army Natick Soldier Center* (**41**, 5, p. 1191) Article based on AIAA Paper 2003-2121

C04-147 Numerical and Experimental Study of Flow Structure of Low-Aspect-Ratio Wing. Tang Jian, *Tsinghua Unversity, China (PRC)*; and Zhu Ke-Qin, *Tsinghua University, China (PRC)* (**41**, 5, p. 1196) Article

C04-148 Nonlinear Flutter Aspects of the Flexible High-Speed Civil Transport Semispan Model. Muhammad R. Hajj, *Virginia Polytechnic Institute and State University*; and Walter A. Silva, *NASA Langley Research Center* (**41**, 5, p. 1202) Article based on AIAA Paper 2003-1515

C04-149 The μ-k Method for Robust Flutter Solutions. Dan Borglund, *Royal Institute of Technology, Sweden* (**41**, 5, p. 1209) Article

C04-150 Uncertainty Quantification in Aeroelasticity: Recent Results and Research Challenges. Chris L. Pettit, *U.S. Air Force Research Laboratory* (**41**, 5, p. 1217) Article

C04-151 Preliminary Design of a Structural Wing Box Under a Twist Constraint Part I. Rakesh K. Kapania and Sangeon Chun, *Virginia Polytechnic Institute and State University* (**41**, 5, p. 1230) Article based on AIAA Paper 2003-2004

C04-152 Near-Wake Characteristics of an Oscillating NACA 4412 Airfoil. Jo Won Chang, *Hankuk Aviation University, South Korea* (**41**, 5, p. 1240) Technical Note

C04-153 Visualized Vortices on Unmanned Combat Air Vehicle Planform: Effect of Reynolds Number. M. Elkhoury and D. Rockwell, *Lehigh University* (**41**, 5, p. 1244) Technical Note

C04-154 Suppression of Wing Rock Using Artificial Neural Networks and Fuzzy Logic Controller. A. G. Sreenatha and P. P. Wong, *University of New South Wales, Australia*; and J. Y. Choi, *Seoul National University, South Korea* (**41**, 5, p. 1247) Technical Note

C04-155 Transpiration Boundary Condition for Computational Fluid Dynamics Solutions in a Noninertial Reference Frames. Timothy J. Cowan, Charles R. O'Neill, and Andrew S. Arena, *Oklahoma State University* (**41**, 5, p. 1252) Technical Note

C04-156 Mechanization and Control Concepts for Biologically Inspired Micro Air Vehicles. David L. Raney, *NASA Langley Research Center*; and Eric C. Slominski, *Virginia Polytechnic Institute and State University* (**41**, 6, p. 1257) Article based on AIAA Paper 2003-5345

C04-157 Modeling Viscous Transonic Limit Cycle Oscillation Behavior Using a Harmonic Balance Approach. Jeffrey P. Thomas, Earl H. Dowell, and Kenneth C. Hall, *Duke University* (**41**, 6, p. 1266) Article

C04-158 An Object-Oriented Unsteady Vortex Lattice Method for Flapping Flight. Lyle N. Long and Tracy E. Fritz, *Pennsylvania State University* (**41**, 6, p. 1275) Article

C04-159 Three-Dimensional Integrated Thermodynamic Simulation for Wing Anti-Icing System. Hong-Tao Liu and Jun Hua, *University of Toronto, Canada* (**41**, 6, p. 1291) Article

C04-160 Simulation of Flow About Rotating Forebodies at High Angles of Attack. S. Saephan and C. P. van Dam, *University of California, Davis*; C. M. Fremaux, *NASA Langley Research Center*; and T. DalBello, *University of Toledo, NASA John H. Glenn Research Center* (**41**, 6, p. 1298) Article

C04-161 Development of Powered Resonance-Tube Actuators for Aircraft Flow Control Applications. Ganesh Raman and Andrew Mills, *Illinois Institute of Technology*; and Valdis Kibens, *The Boeing Company* (**41**, 6, p. 1306) Article

C04-162 Numerical Analysis of Store-Induced Limit-Cycle Oscillation. Philip S. Beran, Narendra S. Khot, Franklin E. Eastep, Richard D. Snyder, and Jeffrey V. Zweber, *U.S. Air Force Research Laboratory* (**41**, 6, p. 1315) Article

C04-163 Time Delays In Visually Coupled Systems During Flight Test and Simulation. Sion Jennings, *National Research Council of Canada, Canada*; Lloyd D. Reid, *University of Toronto Institute for Aerospace Studies, Canada*; Gregory Craig, *National Research Council of Canada, Canada*; and R. V. Kruk, *CAE Ltd., Canada* (**41**, 6, p. 1327) Article

C04-164 Microactuators for Projectile Flight Control Systems: a Feasibility Study. Gjoko Apostolovski and Yiannis Andreopoulos, *The City College of the City University of New York* (**41**, 6, p. 1336) Article

C04-165 Model for Parachute Canopy Deformation and Feedback on Descent Properties. Mayer Humi, *Worcester Polytechnic Institute* (**41**, 6, p. 1347) Article

C04-166 Numerical Analyses of Discrete Gust Response for an Aircraft. Guowei Yang, *Chinese Academy of Sciences, China (PRC)*; and Shigeru Obayashi, *Tohoku University, Japan* (**41**, 6, p. 1353) Article based on AIAA Paper 2003-3513

C04-167 Level Estimation of Extended Acoustic Sources Using a Parametric Method. Daniel Blacodon and Georges Elias, *ONERA, France* (**41**, 6, p. 1360) Article based on AIAA Paper 2003-3199

C04-168 Understanding Ducted Rotor Antitorque and Directional Control Characteristics Part II: Unsteady Simulations. Emre Alpman and Lyle N. Long, *Pennsylvania State University*; and Bruce D. Kothman, *Boeing Defense and Space Group* (**41**, 6, p. 1370) Article based on AIAA Paper 2003-4231

C04-169 Experimental Study on the Application of Gurney Flap and Apex Flap on Delta Wing. Jing-Xia Zhan and WANG Jin-jun, *Beijing University of Aeronautics and Astonautics, China (PRC)* (**41**, 6, p. 1379) Article

C04-170 Transition Prediction on the Slat of a High-Lift System. Mujeeb R. Malik and Ray-Sing Lin, *High Technology Corporation* (**41**, 6, p. 1384) Article

C04-171 Particle Image Velocimetry Measurements on a Delta Wing with Periodic Forcing. Stefan G. Siegel, Thomas E. McLaughlin, and Julie A. Albertson, *U.S. Air Force Academy* (**41**, 6, p. 1393) Article based on AIAA Paper 2001-2436

C04-172 Control of VR-7 Dynamic Stall by Strong Steady Blowing. David Weaver, *Lockheed Martin Missiles and Fire Control*; Kenneth McAlister, *NASA Ames Research Center*; and Jin Tso, *California Polytechnic State University* (**41**, 6, p. 1404) Article based on AIAA Paper 98-2413

C04-173 Momentum Vector Control for Spin Recovery. Dong-Chan Lee, *Systems Technology, Inc.*; and M. G. Nagati, *Wichita State University* (**41**, 6, p. 1414) Article based on AIAA Paper 2000-0893

C04-174 Wind-Tunnel Measurements of Hazard Posed by Lift-Generated Wakes. Reza Karkehabadi, *Lockheed Martin/NASA Langley Research Center* (**41**, 6, p. 1424) Article

C04-175 Analysis of the Flight Attempt by Samuel Langley's "Great Aerodrome." Lorenzo Auriti, *National Research Council Canada, Canada*; and James DeLaurier, *University of Toronto, Canada* (**41**, 6, p. 1430) Article

C04-176 A Static/Dynamic Correction Approach for Reduced-Order Modeling of Unsteady Aerodynamics. Jeffrey P. Thomas, Earl H. Howell, and Kenneth C. Hall, *Duke University* (**41**, 6, p. 1440) Article

C04-177 Order Reduction of State-Space Aeroelastic Models Using Optimal Modal Analysis. Tanyoun Kim, Kanivenahalli S. Nagaraja, and Kumar G. Bhatia, *Boeing Commercial Aircraft* (**41**, 6, p. 1440) Article

C04-178 Influence of Nonlinear Elastomer on Isolated Lag Dynamics and Rotor/Fuselage Aeromechanical Stability. G. Pohit, C. Venkatesan, and A. K. Mallik, *Indian Institute of Technology, India* (**41**, 6, p. 1449) Article

C04-179 Aeroelastic Modeling of Trailing-Edge-Flap Helicopter Rotors Including Actuator Dynamics. Jinwei Shen and Inderjit Chopra, *University of Maryland* (**41**, 6, p. 1465) Article

C04-180 State-Space Model Generation for Flexible Aircraft. Timothy A. Smith, James W. Hakanson, and Salish S. Nair, *University of Missouri*; and Rudolph N. Yurkovich, *The Boeing Company* (**41**, 6, p. 1473) Article

C04-181 Model of the Neuromuscular Dynamics of the Human Pilot's Arm. M. M. van Paasen, J. C. (Hans) van der Vaart, and J. A. (Bob) Mulder, *Delft University of Technology, The Netherlands* (**41**, 6, p. 1482) Article

C04-182 Modeling Mechanical Fasteners in Single-Shear Lap Joints. Dale Cope and Thomas E. Lacy, *Wichita State University* (**41**, 6, p. 1491) Article

C04-183 Thermal Buckling Suppression of Supersonic Vehicle Surface Panels Using Shape Memory Alloy. Xinyun Guo, Adam Przekop, and Chuh Mei, *Old Dominion University*; and Y. Y. Lee, *City University of Hong Kong, Hong Kong* (**41**, 6, p. 1498) Article

C04-184 HELIPLAT: Design, Aerodynamic, Structural Analysis of Long-Endurance Solar-Powered Stratospheric Platform. Giulio Romeo, Giacomo Frulla, Enrico Cestino, and Guido Corsino, *Politecnico di Torino, Italy* (**41**, 6, p. 1505) Design Forum

C04-185 Effects of Wing and Canard Sweep on Lift-Enhancement of Canard-Configurations. Bao-Feng Ma, Pei-Qing Liu, and Yuan Wei, *Beijing University of Aeronautics and Astronautics, China (PRC)* (**41**, 6, p. 1521) Technical Note

C04-186 Aeroelastic Model Design Using an Integrated Optimization Approach. Martin Carlsson, *Royal Institute of Technology, Sweden* (**41**, 6, p. 1523) Technical Note
